About Me

Fourth-year Software Engineering student at TekUp University who likes building websites and seeing them come to life. I focus on web full-stack development from data modeling to getting the UI to feel right. Built a few complete systems solo, including an AI-powered e-learning platform, and I'm still figuring out my style as I go.

Education

TekUp University **2025**
Bachelor of Software Engineering (GLSI) *Tunis, Tunisia*

Institut Supérieur d'Informatique et de Multimédia **2022**
License in Computer Science and Multimedia *Gabès, Tunisia*

Professional Experience

IResCoMath Lab **2024**
Full-Stack Developer
- Built a full-stack research management system serving 30+ members, covering authentication, publication tracking, and member administration.
- Developed a React.js frontend with Hooks-based state management and React Router, reducing page load friction across 5+ core views.
- Engineered a custom XML parser to automatically sync publication data from DBLP.org into MongoDB, eliminating manual data entry for the research team.

Mammut Web Solutions **2023**
Mobile Developer Intern
- Built a Flutter quiz app for medical professionals with a clean, responsive UI across 10+ question categories.
- Designed and integrated a Node.js RESTful API handling quiz logic, user sessions, and result tracking, tested with Postman.

Projects

LearnAI Hub | *Next.js 16, TypeScript, MongoDB, OpenAI, Gemini AI, NextAuth.js, JWT, Vercel* **2025**
- Built a full-stack e-learning platform with 3 role-based portals (Admin, Instructor, Student), securing access via NextAuth.js, JWT, and a custom `RouteGuard` with Google OAuth reducing unauthorized access surface across all routes.
- Integrated OpenAI and Gemini APIs to power a context-aware AI chatbot, improving student engagement by surfacing answers directly from active course content.
- Automated certificate issuance using jsPDF and html2canvas, generating PDF certificates on 100% course completion and passing quiz scores with zero manual intervention.

Employee Management System (EMS) | *Java 17, Spring Boot 3, Spring Security, JWT, Thymeleaf, MySQL* **2025**
- Built a complete HR platform for 4 roles (Admin, HR, Manager, Employee) with isolated dashboards, leave request workflows, and team management deployable via Docker.
- Secured all endpoints with Spring Security and stateless JWT, enforcing role-based access at both route and service levels.
- Eliminated N+1 query issues using Spring Data JPA with DTO projections, improving performance across list-heavy HR views.

HealthCare System | *Symfony 6, Doctrine ORM, MySQL, Twig, EasyAdmin* **2025**
- Built a clinic management platform digitizing the full patient journey appointment booking, doctor assignment, prescriptions, and medical records across 3 portals for Patients, Doctors, and Admins.
- Implemented RBAC using Symfony Security Voters, ensuring doctors access only their own patients' data while admins retain full oversight.
- Integrated EasyAdmin for CRUD operations, VichUploaderBundle for secure file uploads, and Doctrine Migrations for version-controlled schema evolution.

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, PHP, Dart,C++

Frameworks & Libraries: Next.js, React, Node.js, Express.js, Spring Boot, Symfony, Flutter

Databases: MongoDB, MySQL, PostgreSQL

Tools & Platforms: Git, GitHub, GitHub Actions, Docker(Basic), Vercel, Postman, VS Code, Figma

Practices: REST APIs, Agile, Role-Based Access Control (RBAC), JWT Authentication

Involvement

- AIESEC Member (2022–2023)

Languages

- Arabic
- French
- English
