About Me

Final-year Software Engineering student at TekUp University with four internships across Java/Spring Boot, Angular and MERN, most recently building supplier integrations for a travel booking platform. Looking for an end-of-study internship (PFE) in full-stack or back-end development.

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, Dart

Frameworks & Libraries: Next.js, React, Angular, Node.js, Express.js, Spring Boot, Symfony, .NET, Flutter

AI & APIs: OpenAI API, Gemini API, Vapi AI, ElevenLabs, Google OAuth

Databases: MongoDB, MySQL, PostgreSQL

Tools & Platforms: Git, GitHub, GitLab, Docker, JUnit, Mockito, Postman, Vercel, VS Code, Figma, Linux

Professional Experience

AMSYS Consulting | ***Java 21, Spring Boot, Angular, PostgreSQL*** **Jul–Sep 2026**

Full-Stack Developer Intern *Remote*

- Owned 2 modules of a travel booking platform end to end, including a supplier integration service that unifies 4 flight and hotel APIs (Duffel, Sabre, Travelport, Hotelbeds) behind one REST API using a hexagonal design.
- Ran supplier searches in parallel on Java virtual threads with per-supplier timeouts, so one failing supplier never blocks the rest, and made bookings safe with idempotency keys, per-supplier rate limits, and search-only retries.
- Built the master catalogue service and its Angular admin app (15 screens): 13 entities, 81 REST endpoints, JWT roles, Flyway migrations, and an approval workflow for supplier data mappings.

IResCoMath Lab | ***MongoDB, Express.js, React.js, Node.js*** **Feb–Jun 2024**

Full-Stack Developer Intern *Tunis, Tunisia*

- Built a research management system for 30+ members, covering authentication, publications, and member management.
- Engineered a custom XML parser to automatically sync publication data from DBLP.org into MongoDB, eliminating manual data entry for the research team.

Mammut Web Solutions | ***Flutter, React, Node.js, Express.js, MongoDB*** **Jun–Jul 2023, Jul–Aug 2025**

Mobile & Web Developer Intern *Remote*

- Built full-stack features across two internships, spanning a Flutter quiz app for medical professionals with 10+ question categories and a MERN admin dashboard to manage it.
- Developed the Node.js/Express.js REST API behind the app (quiz logic, user sessions, result tracking, tested with Postman) and the dashboard that lets the team manage questions, categories, and users without editing the database by hand.

Projects

AI Interview Simulator | *React, Node.js, Express.js, MongoDB, Vapi AI, Gemini API* | Live Demo | GitHub **Apr–May 2026**

- Built a MERN platform that runs real-time voice mock interviews through Vapi AI, with 4 interviewer personas (Friendly HR, Strict Technical, Stress Tester, Theoretical Expert) and a live transcript during the call.
- Added CV-tailored interviews: uploaded PDF/DOCX resumes are parsed into structured data (skills, experience, projects) with Gemini, then passed to the voice agent so questions target the candidate's own background.
- Generated post-interview reports by scoring the full transcript with Gemini (overall, communication, technical and per-question feedback) under strict no-hallucination rules, with model rotation and exponential backoff to handle API rate limits.

LearnAI Hub | *Next.js, TypeScript, MongoDB, OpenAI, Gemini AI, NextAuth.js* | Live Demo | GitHub **Oct–Dec 2025**

- Built a full-stack e-learning platform with 3 role-based portals (Admin, Instructor, Student), securing access via NextAuth.js, JWT, Google OAuth, and a custom `RouteGuard`.
- Integrated OpenAI and Gemini APIs into a context-aware chatbot that answers student questions from course content.
- Automated certificate issuance using jsPDF and html2canvas, generating PDF certificates on 100% course completion and passing quiz scores with zero manual intervention.

Employee Management System | *Java, Spring Boot 3, Spring Security, JWT, Thymeleaf, MySQL* | GitHub **Oct–Dec 2025**

- Built a complete HR platform for 4 roles (Admin, HR, Manager, Employee) with isolated dashboards, leave request workflows, and team management deployable via Docker.
- Secured all endpoints with Spring Security and stateless JWT, enforcing role-based access at both route and service levels.
- Eliminated N+1 query issues using Spring Data JPA with DTO projections, improving performance across list-heavy HR views.

Education

TekUp University **Expected 2027**

Engineering Degree in Software Engineering (GLSI) – Final Year *Tunis, Tunisia*

Higher Institute of Computer Science and Multimedia **2022–2024**

License in Computer Science and Multimedia *Gabes, Tunisia*

Involvement

- AIESEC Member (2022–2023)

Languages

- Arabic (Native), French (B2), English (C1)
